

# Getting Started with Spark: The Architecture and Basic Concepts

# After this video you will be able to..

- Describe how Spark does in-memory processing using the RDD abstraction
- Explain the inner workings of the Spark architecture
- Summarize how Spark manages and executes code on Clusters

**What does in memory  
processing mean?**

# MapReduce

# Spark

# Spark

## Resilient Distributed Datasets

# Resilient Distributed **Datasets**

*Dataset*

*Data storage created from:  
HDFS, S3, HBase, JSON, text,  
Local hierarchy of folders*

*Or created transforming  
another RDD*

# Resilient **Distributed** Datasets

*Distributed*

*Distributed across the cluster  
of machines*

*Divided in partitions, atomic  
chunks of data*

# Resilient Distributed Datasets

*Resilient*

*Recover from errors, e.g.  
node failure, slow processes*

*Track history of each  
partition, re-run*

# Spark Architecture

# *Driver Program*

```
In [1]: lines = sc.textFile("hdfs://user/cloudera/words.txt")
```
